

## Butt Roll Safe-Slab™

### Machine Specifications are Based on Customer Needs

#### Butt Roll Safe-Slab™

The Butt Roll Safe-Slab™ offers a safe, productive and hands free slabbing solution for butt rolls. Machine operators are removed from the cutting process and slabbing occurs automatically within a wire mesh enclosure. The Butt Roll Safe-Slab™ features interlocking doors for added safety. The slabbing is performed by the automated cutting mechanism and is activated by the operator via push button control. The operator only has to load the butt roll onto the slabbing arm, the rest of the slabbing process is controlled via the externally mounted operator control panel.

#### Features:

- Hands free, push button activated slabbing
- Wire mesh enclosure for added safety
- Interlocking doors
- Cut headers in half for easier disposal
- Externally mounted operator control panel
