

Appleton™

DOUBLE E GROUP

APPLETON Side Load Slabber

Dramatically reduces cut and strain injuries

Increases efficiency in slabbing operations

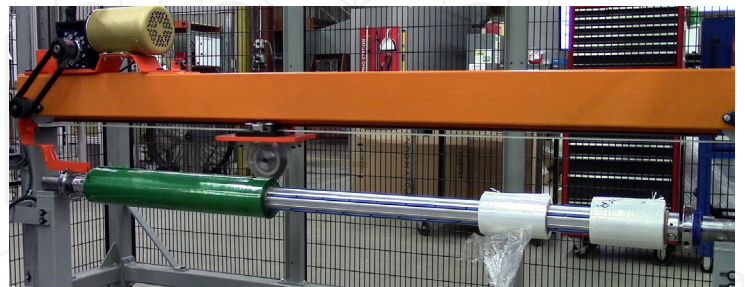

Appleton **Side Load Slabbers** remove operators from the dangers of manual knife slabbing via a protective enclosure and multiple electronic sensors that will stop the Side Load Slabber should an operator enter the cutting area.

Operation is easy. The operator simply loads the roll into the Side Load Slabber and then starts the slabbing process. The automated circular knife makes multiple passes over the roll cutting the material. Once the slabbing is complete, the operator safely removes the shaft and core from the system.

FEATURES

- Easy-to-use, robustly designed
- Eliminates utility knives, reducing cut and strain injuries
- Increases waste recovery
- Allows reuse of expensive cores
- Can handle almost any material on any size core
- Max roll dimensions: 72" width, 30" OD
- 480/3/60 electric
- Pause and peel functionality for difficult materials

Sizes up to a 72" wide roll or multiple rolls equaling 72"
